Mesa Verde National Park COLORADO

February 27, 1953

Memorandun

To: Regional Director, Region Three

From: Coordinated Superintendent

Subject: Excessive or Incompatible Use of Park Areas.

Forwarded herewith, in duplicate, is Superintendent Mahan's report on Excessive or Incompatible Use of Colorado National Monument.

While I agree with Mr. Mahan's appraisal of the situation at Colorado I would like to point out that the heavy local use in that area should actually be considered as normal in view of the proximity of the monument to nearby communities.

There is no problem of this nature yet at Black Canyon, Hoevenweep or Yucca House, and no report will be made for them.

It is doubtful that the Director's memorandum is applicable to Mesa Verde, since those who visit the park from within a radius of 100 miles are less than 5% of our total traffic. Though local visitors do come to the park, picnic, visit the ruins and make use of the area and its facilities, they have not resulted in a problem such as can be found in some other areas. The Forest Service, State and other agencies have developed recreational facilities in the nearby areas for fisherman, hunters, skilers and others. Any additional facilities we might encourage them to build would have little bearing, we believe, on the number of visitors we must accommodate.

The use that we now have which is "excessive" comes not from the number of visitors, but rather from lack of adequate facilities and accommodations.

UNITED STATES DEPARTMENT OF THE INTERIOR NATIONAL PARK SERVICE Region Three Santa Fe, New Mexico

December 12, 1952

Memorandum No. 52-98

To: Region Three Superintendents

From: Acting Regional Director

Subject: Excessive or Incompatible Use of Park Areas - Report Due March 1, 1953

The field officials attending the "Area Operations" Conference in Glacier National Park in September made the following recommendation:

"That the Service should encourage recreation developments by other local or State governments where surveys indicate there is need to relieve Service areas from incompatible or excessive use."

Director Wirth in his FO-166-52 memorandum of November 20 has asked that the regional offices make a study of Service areas with a view to determining to which areas this recommendation may be applicable and to what extent State and county recreation developments may help to reduce the demand on areas of this Service.

To assist in this study I am asking that you review your local situation and prepare a reply to this office as outlined in the questions below:

1. Is your area receiving excessive or incompatible use?

2. Define and describe such excessive or incompatible uses.

3. Is the excessive use which you wish to reduce due to visitors from the local region (radius of 100 miles)?

4. To what extent would the development of recreational facilities by local or State governments relieve the excessive or incompatible use of your area?

5. Give names and locations of areas which might be developed so as to relieve any excessive use of your area.

6. What features would you suggest for the development of areas by State or local governments to reduce the use of your area?

Please submit any additional information on this subject which you believe to be pertinent to the problem. This problem is of such deep interest to the National Park System that it warrants thorough consideration as presently or potentially affecting the areas under your administration and detailed discussion, rather than perfunctory answers to the above questions.

It is requested that your reply reach us by March 1, 1953.

UNITED STATES PARTMENT OF THE INTERIOR NATIONAL PARK SERVICE OLORADO NATIONAL MONUMENT STATUSTICS Fruita, Colorado

January 27, 1953

Bengrandun

To: Regional Director

From: Superintendent, Colorado

Subject: Excessive or Incompatible Use, Colorado National Homment

Reference is made to Mr. Patrust a memorandum No. 52-98 of December 12, 1952 requesting information on excessive or incompatible use of Service areas.

The following is the requested information for Colorado National Monument in accordance with specific questions contained in the above mentioned memorandum.

> 1. This moment is receiving considerable use which is incompatible with the original concept of the use of areas considered worthy of mational recognition and administration by the National Park Service.

2. Due to the close proximity of this area to Grand Junction and other towns in the Grand Valley there has always been a great amount of pionic use for approximately eight months out of the year, it being only a one half hour drive from Grand Junction.

3. The use we should try to reduce is by visitors within a radius of 30 miles.

4. Development of reoreational facilities by local and State governments in the way of furnishing pionic facilities in the Grand Valley, at lower elevations, would tend to relifye the pressure in the spring and fall. Further development of this type of facility by the forest Service and Eureau of Land Hangement, on lands under their jurisdiction, at higher elevations would help to religge the congestion during the warmer summer months.

- 5. Areas in the vicinity which could be developed to relieve the pressure are:
 - (a) Development of more pionic facilities in the city parks of Grand Sumption.
 - (b) Development of plonic areas and sites along the Colorado River throwshout the Grand Valley.

1.1

(c) Development of additional picnic arsas on Pinyon Mess, approximately 25 miles west of Grand Junotion and development of the same type of sites along the lower elevations of Grand Mess, cast and south of Grand Junotion, Much as Kannah Greek, etc. Mess lands are controlled by the Forest Service and Eurean of Land Mangement.

6. Our only encountry or incompatible use at the present time is pickle use and furnishing of sites containing tables, fireplaces, and water and sanitation facilities for planke use in the immediate visinity would tend to reduce our present beavy use. The development of sites along the Colorado River should also include comparemnd use to relieve contemplated future pressure on compgrounds within the mountaint.
